Breakfast of Champions Meeting – Tabletop Discussion

Introduction to Tabletop Discussion:

- As we develop our expansion plans, what does a “family-based model” look like? How could it work? What are the greatest needs it would meet?
- We want and need your expertise to inform this ongoing and longer term.

Instructions:

1. Identify a note-taker and someone to report out at each table.
2. Pick 2-3 cases below and please discuss:
 - How would your current workflows identify these issues?
 - How would you serve this family right now? Who would you reach out to?
 - What services would be most helpful? What are the gaps?
3. If you completed the cases, explore these questions at your table:
 - How do you define “family care”?
 - How could CHTs facilitate a “family care” approach across adult and pediatric providers?
 - What resources would support you in your work in trying to help families?

Case 1 – You are seeing an 8-year-old with her mom. There is another school-aged child in the home. Multiple risk drivers present including irregular school attendance, immigration concerns and unstable housing.

Case 2 – You are seeing a 23-year-old with an infant born with Neonatal Abstinence Syndrome (NAS). She has 2 other children in foster care with whom she wants to reunite. She faces transportation barriers.

Case 3 - You are seeing a woman with 2 toddlers receiving Early Intervention. Her husband was recently diagnosed with bipolar and anxiety and has been in and out of the hospital 3 times since March. She said that she doesn't know how to navigate the health care system and the husband can't work, so the financial situation is dire. She is wondering if he can file for disability, but not sure how to go about it.

Case 4 – You are seeing a 52-year-old female patient with diabetes, HTN who has gone to the ED twice in the last 3 months due to “not feeling well”. Noted to have high blood sugars. She has two teenage children living in the home, having trouble buying healthy foods despite SNAP benefits and is concerned that she may face eviction. On further discussion, she raises concerns about her 15-year-old who she believes is smoking marijuana and had recent dental work.
